igure 6

701

Inter-cell HO triggered for MS in Cell1

702

RNC for Cell1 obtains measurement table from CRRM if table not stored at RNC

703

RNC checks table to find system/frequency with highest priority and selects this as target HO system/frequency

704

MS instructed by RNC to perform CM measurements with target system/frequency. RNC provides MS list of all cells in the target system/frequency

705

Handover triggered to cell with highest measured signal level

706

If measurement not successful with target system/freq, RNC selects system/frequency with next highest priority as target system/frequency, and repeats step 704 and 705
